Experience

CommandLink
12/2023 - Present

Full-Stack Software Developer — Austin, TX (Remote)

CommandSecurity | *Ansible, FastAPI, Laravel, React, MySQL, OpenSearch, Celery, Jenkins*

- Supported first-year CommandSecurity growth to roughly $400K annual revenue across a growing customer portfolio
- Centralized security actions, alerts, and asset visibility in CommandSecurity as a single pane of glass
- Integrated endpoint detection and response (EDR), cloud infrastructure, and email security tools
- Migrated legacy PHP Yii services to Python FastAPI microservices for the CommandSecurity platform
- Normalized EAV-modeled data into relational MySQL schemas, improving backend query performance and maintainability
- Moved customer sync from request-time triggers to Celery event jobs, reducing API load and sync failures
- Built observability and product analytics workflows with Graylog, Prometheus, Grafana, and PostHog
- Built Jenkins CI/CD pipelines for Docker builds, ACR publishing, and Azure Container Apps deployments

KnowledgeBase | *Terraform, FastAPI, Swagger, CosmosDB, Blob Storage, Cognitive Search, Docker*

- Implemented hybrid vector and keyword retrieval in Azure Cognitive Search for more relevant article discovery
- Provisioned Azure backend infrastructure with Terraform across Cosmos DB, Blob Storage, and Cognitive Search
- Built FastAPI services for KnowledgeBase content APIs, platform integrations, and Swagger-documented endpoints

International Public Safety Data Institute
07/2023 - Present

Software Developer (Volunteer, Non-Profit; Outside Full-Time Role) — Austin, TX (Remote)

npm, TypeScript, AWS (Lambda, S3, CloudWatch), RabbitMQ, Elasticsearch, Grafana, Sentry

- Modernized fire-service analytics pipelines used for accreditation, reporting, and operational planning
- Migrated RMS/CAD Lambda functions and normalizers for the NERIS transition from NFIRS
- Integrated geographic, weather, census, parcel, and SHP data sources for regional incident enrichment
- Improved CloudWatch logging and Sentry visibility, accelerating production data debugging
- Standardized incident data transformations across TypeScript ETL workflows

Samsung Austin Semiconductor, LLC.
06/2018 - 12/2023

Engineer II — Austin, TX (Hybrid)

Data Analytics, Python, FastAPI, Streamlit, VBA, Bash Script

- Saved $400K/year by optimizing residual gas analysis (RGA) process cleans and reducing material waste
- Built Big Data process-parameter dashboards that improved workflow monitoring and engineering decisions
- Automated recurring engineering workflows with FastAPI, VBA, and batch scripts, saving approx. 3 engineer-hours/day
- Co-established the Data Solutions subteam and built chat commands for faster engineering information access
- Mentored new engineers on system workflows, defect analysis, and production troubleshooting

Personal Projects

ClearView Vision
04/2023 - 08/2023

React, TailwindCSS, Figma, GitHub Pages, GoDaddy

- Designed and built a production React website for a local optometry practice
- Configured domain, DNS, SSL, and GitHub Pages hosting for *clearviewatx.com*
- Translated Figma wireframes into responsive TailwindCSS components through iterative client feedback

Education

Master of Science in Computer Science, Machine Learning Specialization — *01/2022 - 12/2024*
Georgia Institute of Technology — GPA: 3.80 / 4.00

Bachelor of Science in Mechanical Engineering, Business Foundations Certificate Program — *08/2015 - 05/2018*
The University of Texas at Austin — GPA: 3.83 / 4.00
